We have a well rounded team of personnel with experience in industrial and commercial duct manufacturing. We have access and experience using different types of materials such as stainless steel, prepainted steel, perforated sheet, aluminum and galvanized sheet metal.

At our heart we are an HVAC manufacturing shop and in support of that we have a computer controlled plasma table for quick manufacturing of orders.

We have the capacity and ability to manufacture items to your specific requirements and quantities.

Please contact us with your specific needs and we will do our best to make it happen.
